## DGNB ENV 1.2 criteria

### VOC content

We can hereby declare that all finished VELUX products complies with a VOC requirement below 100 g/l.

The majority of coating material used directly in VELUX production facilities as well as our supplier base's production facilities, has a VOC content below 130 g/l or a production set-up where solvents are extracted from the applied coatings and led to destruction and recycling processes.

We are working with our supplier base to investigate means of reducing the VOC content of the applied coating materials.

We are continuously working on reducing our negative social and environmental impact. Information on this work can be found in our Sustainability Report 2023 ([link](#)).

### Chemical content

We hereby declare that all products sold within our VELUX Commercial division, comply with the following criteria.

- No use of halogenated blowing agents
- No use of brominated flame retardants (HBCD)
- No use of chrome VI oxide surface treatment (passivation)
- No use of lead, cadmium or chrome VI compounds
- None of our products contain any substances (incl. phthalates) of very high concern or substances from the candidate list in quantities of more than 0.1 % (w/w)

Yours sincerely,

Birthe Uldahl Kjeldsen
